

RODE

Designed to provide equity exposure to developed market (excluding the US) and emerging markets with up to 15% less volatility over a complete market cycle than traditional capitalization-weighted indices

Our systematic, rules-based index methodology is designed to simultaneously address risks while seeking exposures to return-enhancing factors:

Set Risk Parameters

Seek to improve diversification versus a cap-weighted benchmark by reducing concentration at the country, sector, and individual company levels

Select Securities

Seek companies with a favorable combination of low valuation (50%), high momentum (30%), and high quality (20%) investment factors

Reconstitute and Rebalance

Reapply the investment process twice a year in March and September to ensure the portfolio stays true to the rules-based index methodology

¹ Expenses are the total annual fund operating expenses as shown in the most recent prospectus.

Risk objectives are measured over a complete market cycle against the underlying index's eligible universe of securities, weighted by market capitalization.

Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For more current performance information to the most recent month ended, please visit hartfordfunds.com.

Investors should carefully consider a fund's investment objectives, risks, charges and expenses. This and other important information is contained in the fund's prospectus and summary prospectus, which can be obtained by visiting hartfordfunds.com. Please read it carefully before investing.

The Hartford Multifactor Diversified International Spliced Index reflects the performance of the Low Volatility International Index through 11/5/19 and the performance of the Diversified International Index thereafter. The Fund's performance and historical returns shown for the periods prior to 11/6/19 are not necessarily indicative of the performance that the Fund would have generated based on its current custom underlying index.

ETF shares are bought and sold at market price, not net asset value (NAV). Total returns are calculated using the daily 4:00 p.m. Eastern Time NAV. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where Fund shares are listed. Market price returns do not represent the returns an investor would receive if they traded shares at other times. Brokerage commissions apply and will reduce returns.

Fund Objective: Seeks to provide investment results that, before fees and expenses, correspond to the total return performance of an index that tracks the performance of companies located in both developed and emerging markets.

The indices, which our multifactor ETFs seek to track, are calculated and distributed by Solactive AG, a firm retained and paid by the Indices' Provider (Lattice Strategies). Lattice Strategies is responsible for the methodology and selection of each index component.

Hartford Multifactor Diversified International ETF

Sector Allocation (%)

RODE diversifies exposure across sectors and explicitly avoids unintended sector concentrations.

	RODE	MSCI ACWI ex USA Index	Underweight/Overweight
Financials	23	21	2

Number of other countries	36

Important Risks: Investing involves risk, including the possible loss of principal. The net asset value (NAV) of the Fund's shares may fluctuate due to changes in the market value of the Fund's holdings which may in-turn fluctuate due to market and economic conditions. The market prices of the Fund's shares will generally fluctuate due to changes in the relative supply of and demand for the shares on an exchange. • The Fund is not actively managed but rather attempts to track the performance of an index. The Fund's returns may diverge from that of the index. • Foreign investments may be more volatile and less liquid than U.S. investments and are subject to the risk of currency fluctuations and adverse political, economic and regulatory developments. These risks may be greater, and include additional risks, for investments in emerging markets. • Investments focused in a particular country, region, industry or group of industries are subject to greater volatility and risk.

The **MSCI ACWI ex USA Index** captures large and mid cap representation across 22 of 23 Developed Markets (DM) countries (excluding the US) and 23 Emerging Markets (EM) countries. Indices are unmanaged and not available for direct investment.

MSCI ACWI ex USA Value Index is a free-float adjusted market-cap weighted index designed to capture large- and mid-cap securities that exhibit overall value style characteristics across developed and emerging market countries, excluding the U.S. MSCI index performance is shown net of dividend withholding tax.

MSCI performance is shown net of dividend withholding tax. IOPV, or Indicative Optimized Portfolio Value, is a calculation disseminated by the stock exchange that approximates the Fund's NAV every fifteen seconds throughout the trading day. **Price/Earnings** is the ratio of a stock's current price divided by the trailing earnings per share for the past 12 months. **Price/Book** is the ratio of a stock's price to its book value per share. **Nominal Companies** represents the total number of companies included in the portfolio, regardless of allocation. **Effective Companies** measures portfolio concentration, in which a higher number would indicate a more diversified portfolio. **Nominal Countries** represents the total number of countries included in the portfolio, regardless of allocation. **Effective Countries** measures portfolio concentration, in which a higher number would indicate a more diversified portfolio. **Debt-to-equity ratio** measures a company's financial leverage calculated by dividing its total liabilities by stockholders' equity. **Return on Equity** is the average amount of net income after taxes that a firm is able to earn as a percent of stockholders equity. **Index Dividend Yield** is the weighted average dividend yield of the securities in the underlying portfolio index (including cash). The number is not intended to demonstrate income earned or distributions made by the Fund and is not necessarily indicative of the dividend yield of the Fund. Fundamental characteristics are based on industry-standard calculation methodologies and determined by Hartford Funds. Holdings may not sum to 100% due to cash allocations.

ETFs are distributed by ALPS Distributors, Inc. (ALPS). Advisory services may be provided by Hartford Funds Management Company, LLC (HFMC), or its wholly owned subsidiary, Lattice Strategies LLC (Lattice). HFMC and Lattice are SEC registered investment advisers. Hartford Funds refers to Hartford Funds Distributors, LLC, Member FINRA, HFMC, and Lattice, which are not affiliated with ALPS.
